Prerequisites				
Aims				
Learning outcomes	<p>Passing the exam in this subject implies that the student can: 1. Define the concept of electrostatic field and the basic quantities that describe it. 2. Define the concept of a linear electrical circuit and the basic principles that describe it (Ohms law, Joules law, Kirchhoffs laws) and solve a direct current circuit. 3. Describe phenomena in the magnetic field and their applications. 4. Describe the behavior of resistors, coils, and capacitors in alternating current circuits. 5. Explain the operating principle and basic characteristics of transformers, asynchronous machines, and direct current machines. 6. Explain the operating principle of basic electronic elements and circuits. 7. Solve standardized problems and analyze the obtained solutions.</p>
